

Installation and Planting Instructions

Thank You! for purchasing a Sybertech self-watering reservoir style planter or hanging basket. These high quality planters will give you years of cost saving enjoyment and wonderfully vibrant displays of colourful plant growth.

We know that you are anxious to start creating your work of “plant art” but before you start adding soil to the planters there are a couple of simple steps that you must undertake.

Each planter and hanging basket contains a number of insets in the inside floor of the planter called filter columns. The wicking material, that Sybertech provides, is to be inserted into the filter columns and **must be pressed all the way to the bottom of these columns to ensure maximum wicking action from the reservoir as well as to keep soil out of the reservoir. This wicking material comes wrapped in plastic. Be sure to remove the protective plastic wrapper from the wicking material before inserting into the filter column or the wicking process will not work!** There are three pieces of wicking material per hole for all of the large planters and one per hole for the hanging baskets.

The wearing of gloves is recommended. The finished process should see the wicking material flush with the planter floor.

To ensure that the wicking material is functioning to maximum effectiveness and to maintain the ongoing health of your planter you should consider changing out this wicking material every three years.

Contact Sybertech to purchase replacements.

After you have filled your planter with soil and young plants you must **top water the plants and soil as well as fill the water reservoir.** This assists with the initial moistening of the soil and helps drive the young root growth deep into the soil. You will need to do this at least once more during the first few days of planting. Once the plants are established the top watering should not be required again.

Nutrients added to the water reservoir allow your plants to show off their fullest display of colour!!

Contact Sybertech as to what product we recommend.

PLEASE NOTE: The green disc on the floor of the planter allows you to clean out the reservoir if ever you should need to do such.

WE WOULD LOVE TO SEE PHOTOS OF YOUR PLANTERS AND BASKETS!!

Please send us photos of your colourful displays. We will be posting photos of your floral masterpieces on our web site with the best photo (as chosen by our esteemed panel of judges....) receiving 25% off on their next order of wicking material.
